

KEVIN JIANG

Brooklyn, NY | (646) 287-9879 | kjiang052003@gmail.com | [linkedin.com/in/kjiangcs](https://www.linkedin.com/in/kjiangcs) | github.com/Erelive

EDUCATION

University at Buffalo, SUNY

Aug 2021 – Aug 2025

Bachelor of Science, Computer Science; School of Engineering and Applied Sciences

Buffalo, NY

- **Coursework:** Software Security, Embedded Operating Systems, Computer Security, Modern Network Concepts, Computational Linguistics, Systems Programming, Software Engineering Concepts

RELEVANT EXPERIENCE

Handshake AI Fellowship

Nov 2025 – Feb 2026

AI Trainer

Remote

- Evaluated 100+ LLM responses across multiple domains, identifying failure patterns and creating 50+ adversarial prompts to improve model evaluation accuracy.
- Improved label consistency across the eval dataset by scoring outputs against rubrics for accuracy, clarity, and depth, feeding structured expert feedback into fine-tuning rounds

Discovery Lab Global

Apr 2023 – Aug 2023

Cybersecurity Program Lead

Dayton, OH

- Reduced human-factor security risks by creating 130+ pages of cybersecurity training materials used to educate high school instructors on phishing, social engineering, and network security practices.
- Made the curriculum hands-on by walking teachers through VPN setup and Wi-Fi hardening to model safe network practices for students

PROJECTS

CosmoBoard | *React, Express.js, Socket.IO, PostgreSQL*

Feb 2026 – Jul 2026

- Contributed 60+ commits across 8 merged pull requests to a real-time collaborative scrum board that drew 10,000+ views in its first week, connecting the PostgreSQL database and wiring up the Express API routes behind the board and card features
- Owned frontend design end to end, building the themed dashboard, auth page, and board views in React with light/dark mode, avatar customization, and responsive mobile layouts
- Built the core task-board workflow with drag-and-drop cards, collapsible columns with WIP limits, threaded comments with S3-backed image uploads, and last-edited attribution for accountability
- Reduced credential-exposure risk by keeping secrets out of version control via a documented .env.example, and hardened account handling with a password-change flow and a fix to a logout defect that left broken sessions

Chat Security Simulation | *Python, Wireshark, Linux*

Oct 2024 – Dec 2024

- Prevented credential leakage in a Python chat application by moving secrets to environment variables across Ubuntu Linux and Windows deployments
- Performed 10+ security tests against XSS, SQL injection, and DoS vulnerabilities across the frontend and backend, validating application resilience through Wireshark traffic analysis

SEED Security Labs | *Python, Scapy, Wireshark, Ubuntu Linux*

Sep 2024 – Dec 2024

- Showed how protocol weaknesses are exploited by running SYN flood and session hijacking attacks, then diagnosing the root cause
- Diagnosed network behavior by capturing and spoofing traffic with Wireshark and Scapy to trace packet flows
- Reinforced secure-communication concepts through hands-on PKI work with encryption and certificate validation

TECHNICAL SKILLS

Languages: Python, C, JavaScript, SQL, HTML, CSS

Frameworks and Libraries: React, Node.js, Express.js, Socket.IO, PostgreSQL, Vite

Networking: TCP/IP, DNS, HTTP, SSH, VPN, Wi-Fi, Network Troubleshooting Concepts

Tools and Platforms: Git, VS Code, Wireshark, Oracle VM, Ubuntu Linux, Windows, Microsoft Office Suite

Security Frameworks: NIST Cybersecurity Framework, NIST SP 800-171, ISO/IEC 27001

CERTIFICATIONS

CompTIA Security+ SY0-701

Oct 2025 – Oct 2028
